Here is the link to the presentation by DWR and USBR on water supply impacts in 2009. See slide # 6.
<http://www.water.ca.gov/news/newsreleases/2009/08122009martinmilligan2.pdf>

To my knowledge, comparable information for 2010 hasn't been calculated by USBR and DWR, but the contractors have estimated total supply reduction in 2010 of just over 1 MAF, of which about 300,000 af is to the CVP. (Of course, this doesn't consider b(2), which I believe Interior plans to be used to account for all CVP impacts) http://www.sldmwa.com/pdf_documents/Jul10_fc.pdf

The SOD Ag contractors are also estimating that next year's allocation will be around 40% or so if it's a wet or average year. And Westlands' most recent notice estimates having almost 450,000 acre feet unused at the end of the water year, much of which may be lost if SLR reaches capacity as expected (hence their recent exchange agreement with MWD).

Attached are my notes from the press briefing call yesterday by the SWRCB on the flows report (I was lurking on the line).
